

Project Manager

Victoria, BC or Toronto, ON

Our client, **StarFish Medical**, is searching for Project Managers who will be the champion for new and existing clients and act as ombudsman to develop business opportunities for our thriving company. Our Project Managers manage uncharted product development projects and lead our talented cross-functional teams of engineers to successfully deliver cutting-edge innovative products on time and on budget.

In this multi-faceted project management position, you will enjoy leading diverse groups through the product life cycle, starting with the creative process for the initial concept, detailed design, through to the manufacturing and production process. Thinking quickly on your feet you respond nimbly to changing circumstances, applying design and project tradeoffs to solve problems on a continuous basis. Your skilled communication creates an environment for open-minded, out-of-the-box thinking resulting in innovative medical technologies that meet QA and regulatory compliance standards.

You will take full ownership of our client relationships, providing them with exceptional support as the single point of contact at StarFish and you have the engineering know-how to take the technical lead in translating the client needs to the product development team. At StarFish, we know, "Our success is measured by the success of our clients."

Please see the *Job Description* at www.TallSky.ca to learn more about the finer details of this position.

About StarFish Medical:

StarFish continues to grow and our teams work in energizing, purpose-designed facilities with some of the best medical device design strategists, designers and engineers in North America to help direct, create and deliver exciting product experiences for varied device markets and customers. Expand your career and industry experience while fostering relationships with our top-tier medical technology clients, all while working on cutting edge projects that range from tactical EMS products, surgical tools and consumer diagnostic devices through to high volume disposables, complex IVD systems, imaging technologies and lab equipment.

You could be working in the heart of Toronto, Ontario, or in beautiful Victoria, BC where visitors are immediately met with a smile and open concept offices. The working environment is filled with both a sense of driven scientific and engineering excellence, and also genuine employee engagement and transparency that is truly meaningful.

In our surveys, our employees rated: peers and culture, interesting and meaningful work, and working conditions (flexibility, environment) as the top reasons they most enjoyed working at StarFish.

If this is the type of collegial and supportive environment you strive to be a part of, and you love to apply the logic and organization of project management and work directly with our clients and product development teams, then we encourage you to read on!

If the idea of developing leading edge products in the medical device field intrigues you, we know you will find the StarFish Compensation package competitive and is commensurate with skills and experience.

How to apply:

Qualified applicants are encouraged to apply in confidence to [TallSky Consulting](#) with a resume and a covering letter that indicates your salary expectations, and describes exactly how your education and experience meet each of the requirements of this position.

We thank all applicants who apply; however only those selected for consideration will be contacted.
